

# Smart Web Apps

We will create an application for you tailored to your business.

Are you looking for an optimal solution for your business and none of the commonly offered applications meet your requirements?

We offer you a very efficient way to create, design and implement a custom application that helps you centralize your data, enable real-time collaboration between all users, automate your work processes and communicate with your existing application environment in a two-way manner.

## Data analysis

Using simple views, you can quickly analyse the processed data.

## Notification

The system automatically informs you about data processing, the status of individual requests and the progress of processes by notifications.

## Quick availability

The web platform makes your application accessible from any type of device with internet connection.

## Automation

You will gradually convert your processes into automatically executed tasks.

## The most common use of our application implementation:

- merge user data from excel tables,
- creating management reports,
- complex automated data processing,
- extending the functionality of existing ERP systems and accounting systems,
- management and administration of tasks with predefined processes,
- complex processing of corporate data with integration to external systems.

## Open source platform with minimal licensing costs

An important feature of our proposed application is open-source environment without unnecessary licenses, which allows collaboration of an unlimited number of internal or external users.
