

# Smart meeting room

Take your business communication to the next level with easy video conferencing with content sharing from any device.

Transform any location into a conference space with one-touch connectivity, easy content sharing and control from the centre of the conference room. With pre-configured systems, MS Teams makes these benefits easy to implement in conference rooms of all sizes.

## Comprehensive videoconferencing solution

The smart boardroom allows for efficient video conferencing to fully replace physical meetings. With support for smartphones, tablets and laptops, users can easily communicate with participants from anywhere.

Simple remote control operation and the ability to share documents during a video call ensure that all participants feel as if they are sitting at the same table.

The Smart Meeting Room is fully compatible with Microsoft Teams and Apple TV, allowing easy video, audio and content sharing from a variety of devices.

## Flexible display options

The monitors in the smart boardroom can be used not only for presentations and video conferences, but also for displaying important information related to the company's operations.

Users can easily schedule the display of welcome messages for visitors, breaking news, weather forecasts or company videos, contributing to more effective internal communication and employee awareness.

The software also makes it easy to schedule the display of this information.

# Smart meeting room

## Solution for every room

### Small rooms

The small Tap package is ideal for small meeting spaces, with Logitech MeetUp's compact design and the ability to be mounted on a desk or wall to save space and minimize cabling.

### Middle rooms

The mid-sized Tap package with Logitech Rally camera is ideal for larger rooms, with a scalable sound system and ultraHD camera to accommodate different sizes and layouts.

### Large rooms

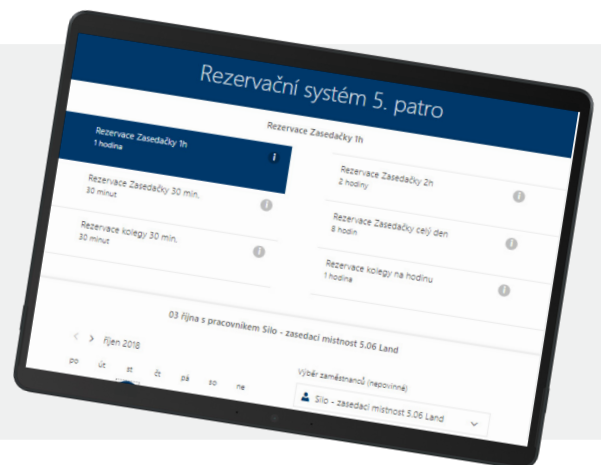

The large Tap with Rally Plus package provides room-wide sound quality and supports up to 7 table microphones, allowing up to 46 people to join the conversation.

## Intuitive reservation system

The smart meeting room has a user-friendly booking system that allows employees to easily schedule and book meetings.

The system is accessible from both a computer and a mobile device and automatically syncs bookings with users' calendars. Users are notified of bookings via email notifications.

**We will design  
the sound and video  
equipment**

**We will explain and  
demonstrate the  
proposed solution**

**We will install  
and set up the  
equipment**

**We will  
educate users**
